Overview

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What are grid-connected and off-grid PV systems?

Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind. Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system.

Where can I find information about solar photovoltaic energy?

For more information about solar photovoltaic energy, visit the following resources: Solar Photovoltaic Technology Basics (U.S. Department of Energy's Office of Energy Efficiency and Renewable Energy) Energy Kids: Solar Photovoltaic (U.S. Energy Information Administration) Energy Saver: Using Solar Electricity at Home (U.S. Department of Energy).

What is a solar photovoltaic (PV) device?

Solar photovoltaic (PV) devices, or solar cells, convert sunlight directly into electricity. Small PV cells can power calculators, watches, and other small electronic devices. Larger solar cells are grouped in PV panels, and PV panels are connected in arrays that can produce electricity for an entire house.

How does photovoltaic (PV) technology work?

Learn the basics of how photovoltaic (PV) technology works with these resources from the DOE Solar Energy Technologies Office. Solar photovoltaic modules are where the electricity gets generated, but are only one of the

many parts in a complete photovoltaic (PV) system.

What is a solar photovoltaic module?

Solar photovoltaic modules are where the electricity gets generated, but are only one of the many parts in a complete photovoltaic (PV) system. Part 1 of the PV Cells 101 primer explains how a solar cell turns sunlight into electricity and why silicon is the semiconductor that usually does it.
