100mw energy storage power station charging and discharging control

Overview

How does the energy storage system work?

Each energy storage unit is connected to the 35kV distribution unit of the booster station through a 35kV collector line and then boosted to 220kV via a 120MVA (220/35kV) transformer. The project is equipped with an energy management system (EMS) to receive grid dispatching commands and manage the charge and discharge of the energy storage system.

How many mw/100 MWh Bess (100 PCs units) are there?

This system implements the monitoring function of 50 MW/100 MWh BESS (100 PCS units) operation status, unified scheduling and energy management functions of BESS, as well as participating in AGC/AVC application functions. As shown in Fig. 3, the BESS consists of 50 containers, each of which is a sub unit of 1 MW/2 MWh.

What is the application of energy storage in power grid frequency regulation services?

The application of energy storage in power grid frequency regulation services is close to commercial operation . In recent years, electrochemical energy storage has developed quickly and its scale has grown rapidly , . Battery energy storage is widely used in power generation, transmission, distribution and utilization of power system .

What is battery energy storage?

Battery energy storage is widely used in power generation, transmission, distribution and utilization of power system. In recent years, the use of large-scale energy storage power supply to participate in power grid frequency regulation has been widely concerned.

How many PCs units are in a 1 mw/2 MWh energy storage container?

Each 1 MW/2 MWh energy storage container includes two sets of 500 kW PCS,

2 MWh battery and corresponding battery management system. In order to simulate various situations, this paper assumes that PCS units 1–100 are divided into 5 groups, every 20 is a group.

Can large-scale energy storage power supply participate in power grid frequency regulation?

In recent years, the use of large-scale energy storage power supply to participate in power grid frequency regulation has been widely concerned. The charge and discharge cycle of frequency regulation is in the order of seconds to minutes.
