2 75mwh energy storage system in Singapore

Overview

What is Singapore's biggest battery storage project?

Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia. The opening was hosted by the 200MW/285MWh battery energy storage system (BESS) project's developer Sembcorp, together with Singapore's Energy Market Authority (EMA).

What is Southeast Asia's largest energy storage system?

Sembcorp Industries (Sembcorp) and Singapore's Energy Market Authority (EMA) have officially opened what is being touted as Southeast Asia's largest energy storage system. The Sembcorp energy storage system (ESS) spans two hectares of land in the Banyan and Sakra region on Jurong Island, southwest of the main island of Singapore.

Will Singapore be able to store 200mwh of electricity three years ahead?

He also noted that the storage system marked Singapore's ability to store at least 200MWh of electricity three years ahead of time. EMA had previously set a target for the country to deploy at least 200MWh of energy storage, with the shift towards renewables, at some time past 2025.

How much energy storage will Singapore have by 2025?

With just one project, EMA has achieved and exceeded Singapore's deployment target of 200MWh of energy storage by 2025. The target was set as part of the EMA programme, Accelerating Energy Storage Access for Singapore (ACCESS), through which the EOI solicitation was held.

How much energy can a Sembcorp energy storage system store?

Sembcorp said that the energy storage system has a maximum storage capacity of 285 megawatt hour (MWh), and, in a single discharge, can meet the electricity needs of around 24,000 four-room HDB households for one day.

What is Singapore's solar energy system (ESS)?

Built across two sites on Jurong Island, our ESS enhances Singapore's grid resilience by mitigating the impact of solar intermittency as the republic progresses towards achieving its 2030 solar target of at least 2GWp and energy storage systems deployment of 200MWh beyond 2025.
