# 20 lithium batteries assembled into a 36v battery pack

#### **Overview**

What kind of batteries are used in electric bicycle batteries?

Tools and materials required: 18650 cells, which are used in many different consumer electronics from laptops to power tools, are one of the most common battery cells employed in electric bicycle battery packs.

What is a 24v battery for a low power ebike?

It's a 24V 5.8AH battery for a small, low power ebike. But you can simply add more cells to make a higher voltage or higher capacity pack to fit your own needs. Check out the video below: Now I'm sure you're all jazzed about building your own battery pack.

How many 18650 batteries do I Need?

Depending on the size of the battery you plan to build, you'll need anywhere from a few dozen to a few hundred of them. There are many different types of 18650 cells out there to choose from. I prefer to use name brand cells from companies like Panasonic, Samsung, Sony and LG.

How many cells are in a 1s3p battery?

Once you've completed the bottom welds you'll have one complete parallel group, ready to go. This is technically a 1S3P battery already (1 cell in series, 3 cells in parallel). That means I've just created a 3.6V 8.7Ah battery.

How much Ah does a battery have?

This specific battery gave 8.54 Ah on its first discharge cycle at a discharge rate of 0.5c, or about 4.4 A. That result is actually pretty good, and equates to an individual average cell capacity of about 2.85 Ah, or 98% of the rated capacity.

Can you build your own battery pack?

Now I'm sure you're all jazzed about building your own battery pack. But just in case, I'm going to leave you with an awesome video featuring battery builder Damian Rene of Madrid, Spain building a very large, very professionally constructed 48V 42AH battery pack from 18650 cells.
