24V2000W inverter input current

Overview

How many amps does a 2000W inverter draw?

If your battery bank is rated at 24 Volts, the 2000W inverter could draw up to 120 Amps of current. If the battery bank is rated at 48V, the amp draw would not exceed 60 Amps. However, this is assuming the 2000W inverter converts power from DC to AC at an efficiency of about 85%.

What battery do I need for a 2000W 24V inverter?

For the 2000W 24V inverter, we suggest you use a 100Ah battery at least to power the loads. Connect the inverter to a 24V battery with the standard cables provided with inverter, and plug your AC devices into the inverter. Battery voltage mismatch and insufficient capacity will be LO alarm and buzzes to occur in the inverter.

How long will I be responsible for a 2000W 24V inverter?

We will be responsible for 18 months after purchase date. For the 2000W 24V inverter, must connect the inverter to a 24V battery. Battery voltage mismatch and insufficient capacity will be LO alarm and buzzes to occur in the inverter. And we suggest you use a 100Ah battery at least to power the loads, the more capacity the better.

What is a 24V inverter?

Built with truckers and professional drivers in mind, our 24V inverters are compact, lightweight, and quiet in operation. Once connected to your battery, you get a stable and reliable power supply from the output socket ready to handle everything from small electronics to higher-wattage appliances, depending on the model you choose.

How many wires can a 2000W inverter use?

But in both cases, this will limit the maximum current intake of the 2000W inverter to about 185 Amps, which will allow you to use 4/0 AWG copper wires.

However, there are other variables to consider here, such as maximum room temperature and the distance between the inverter and the battery bank.

Can a 2000 watt inverter run on a 12 volt battery?

If your 2000W inverter is running on a 48V battery bank, the fuse or circuit breaker should be rated at 70-80 Amps. If your 2000 Watt inverter is rated for 12VDC, you could use a 225 Amp fuse or circuit breaker, but only if the battery's low voltage cut-off point is set to 12 Volts (as opposed to 10 Volts).
