# Are batteries in energy storage cabinets considered domestically produced

#### **Overview**

Should batteries be used for domestic energy storage?

The application of batteries for domestic energy storage is not only an attractive 'clean' option to grid supplied electrical energy, but is on the verge of offering economic advantages to consumers, through maximising the use of renewable generation or by 3rd parties using the battery to provide grid services.

Are domestic battery energy storage systems safe?

However, even though few incidents with domestic battery energy storage systems (BESSs) are known in the public domain, questions have been raised regarding the safety of these systems. The concern is based on the large energy content within these systems.

What is a domestic battery energy storage system (BESS)?

A domestic battery energy storage system (BESS) will be part of the electrical installation in residential buildings. Examples of standards that cover electrical installations in residential buildings are shown in Table A 2. The HD 60364 series is a harmonization document from CENELEC.

Are domestic lithium-ion battery storage systems safe?

Several standards that will be applicable for domestic lithium-ion battery storage are currently under development or have recently been published. The first edition of IEC 62933-5-2, which has recently been published, covers the safety of domestic energy storage systems.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

How will Section 45 affect domestic battery manufacturing?

Ensure the existing Section 45 provision remains in place as a tool for domestic battery manufacturers to protect and grow their operations. Eliminate punitive excise taxes on strategic battery raw materials to support domestic battery manufacturing by passing the USA Batteries Act.
