# Are the two batteries of the photovoltaic panel connected in parallel or in series

### **Overview**

The batteries have inversely connected as compared to the solar panel connection i.e. batteries are connected in parallel (positive (+ve) terminal to positive (+ve) and negative (-) to negative (-) terminal). What are parallel connected solar panels & series connected batteries?

We are talking about parallel connected solar panels and series connected batteries. This wiring can be done for multiple voltages systems when the solar panel voltage rating is half as compared to the batteries (e.g. 6V PV panels and 12V batteries or 12V solar panels and 24V batteries.).

Can a 24V DC solar panel be wired in parallel?

For a 24V DC solar panel system, both the batteries and solar panels may be wired in parallel connection. The same 24VDC system can be achieved by wiring solar panels in parallel and batteries in series in case of the double voltage rated solar panels as compared to the batteries voltage (e.g 24V Panels in Parallel and 12V batteries in Series).

Can solar panels be connected in series or parallel?

Solar panels can be connected in series, parallel, or a combination of both, depending on the needs of the system. Solar panels in series are connected such that the voltage of the array is increased, while the current remains the same.

How are batteries connected to a solar panel?

The batteries have inversely connected as compared to the solar panel connection i.e. batteries are connected in parallel (positive (+ve) terminal to positive (+ve) and negative (-) to negative (-) terminal). Suppose the batteries rating are 24V (or 12V or 48V), 100Ah.

Can a 6V solar panel be connected with a 12V battery?

Only the same rated solar panel can be wired up either in series or parallel

connection. In other words, 6V pv panel should not be connected with 12 or 24V PV Panel. Similarly, only same rated batteries should be connected in series or parallel configuration. This means a 6V battery should not be connected with 12V batteries.

How to wire solar panels in series?

To wire solar panels in series, connect the positive terminal on the first panel to the negative terminal on the next, and so on. The resulting voltage will be the sum of all of the panel voltages in the series. However, the total current will be equal to the output current of a single panel.
