

#### **SolarInvert Energy Solutions**

# Australia s grid-side energy storage

#### **Overview**

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

Can energy storage bring system security to the grid?

In March this year, the ARENA held an Insights Forum which covered energy storage and technologies that can bring system security to the grid. ARENA also partially funded a report from the CSIRO titled Renewable Energy Storage Roadmap to better understand the challenge.

Which energy storage technology is best for Australia's energy needs?

The CEC said emerging LDES technologies coupled with the energy storage systems in place, would be the best suite to appropriately manage Australia's needs. In March this year, the ARENA held an Insights Forum which covered energy storage and technologies that can bring system security to the grid.

Is energy storage a viable solution to Australia's energy security and reliability needs?

The report finds that energy storage is both a technically feasible and an economically viable approach to responding to Australia's energy security and reliability needs to 2030, even with a high renewables generation scenario.

Should Australia invest in battery storage?

As Australia advances its clean energy ambitions, battery storage stands as

both a technological necessity and a financial opportunity, delivering reliability, sustainability, and long-term economic gains for investors and the broader energy market.

Is there a grid-forming battery in Australia?

This is not the first transmission-connected battery that uses grid-forming control in Australia. In 2018, a 30 MW battery with ABB's grid-forming control was commissioned at the Dalrymple substation in South Australia. Figure 1 shows the current and near-future landscape of grid-forming batteries in the NEM.
