Base station RRU battery requirements

Overview

How many power modules are required in the bbu3900?

One piece of this power module is configured in the BBU3900 by default. One more power module is required if the total power consumption of boards in the BBU3900 is more than 360 W or the BBU3900 requires backup power of less than or equal to 360 W. The second power module is configured in the slot assigned to the UEIU.

What is the maximum output power of RRU?

In GO mode, its maximum output power is 2x60 W. In other modes, its maximum output power is 2x80 W. It can work in GSM, LTE, or GL SDR mode. The number of packages to be configured is determined by the number of sectors, number of carriers, and output power. For detailed specifications, see RRU Technical Specifications.

How much power does a 2x2 RRU need?

AAUs. In the case of 2x2 MIMO (2x30 W), each RRU requires the output power of 60 W and two licenses for RF output power must be configured. In the case of 2x2 MIMO (2x40 W), each RRU requires the output power of 80 W and three licenses for RF output power must be configured.

How many upeu is required in the bbu3910?

One piece of this board (UPEU) is configured in the BBU3910 by default. One more UPEU is required if the total power consumption of boards in the BBU3910 is more than 650 W or the BBU3910 requires backup power of less than or equal to 650 W. The second power module is configured in the slot assigned to the UEIU.

Does bbu3910 need a second power module?

BBU3910. Optional. One piece of this power module is configured in the BBU3910 by default. One more power module is required if the total power

consumption of boards in the BBU3910 is more than 650 W or the BBU3910 requires backup power of less than or equal to 650 W. The second power module is configured in the slot assigned to the UEIU.

Which power amplifier is inside RRU?

Power amplifier is inside of RRU. Here, We introduce individually because Murata has specific products here which support high power and efficiency. The BBU/DU/CU is placed in the equipment room and connected with the RRU via optical fiber. These are responsible for communication through the physical interface and is in a virtualization trend.

Base station RRU battery requirements

Nokia Wireless Base Station Equipment RRU FHEL

A base station, that is, a public mobile communication base station, is a form of radio station. It refers to a radio transceiver station that transmits information with mobile phone terminals
