

## **SolarInvert Energy Solutions**

# Base station single-phase wind power supply

#### **Overview**

What is a standalone renewable powered rural mobile base station?

The standalone renewable powered rural mobile base station is essential to enlarge the coverage area of telecommunication networks, as well as protect the ecological environment. In this paper, a standalone photovoltaic/wind turbine/adiabatic compressed air energy storage based hybrid energy supply system for rural mobile base station is proposed.

What are the design criteria for a hybrid energy supply system?

Design condition The most important performance of the standalone renewables based hybrid energy supply system for rural MBS is the reliability. The system load must be met by the renewable power at every instant. Thus, the LPSP is the system design criteria.

Can a PV/wind/A-CAES based hybrid energy system be used in rural MBS?

A standalone PV/wind/A-CAES based hybrid energy system for rural MBS is proposed. The fan and A-CAES turbine exhaust provide cooling energy besides air conditioner. The performance assessment of the proposed system is carried out. The parametric sensibility and LPSP analysis are implemented.

How photovoltaic-wind turbine configuration affect system performance?

The photovoltaic-wind turbine configuration influences the system performance. The photovoltaic panels number and wind turbines number both have negative effect on the system loss of power supply probability and energy saving ratio, and positive effect on the system dump load ratio and relative fluctuation rate.

Can solar and wind provide reliable power supply in remote areas?

Solar and wind are available freely a nd thus appears to be a promising technology to provide reliable power supply in the remote areas and telecom industry of Ethiopia. The project aim generate and provide cost effective

electric power to meet the BTS electric load requirement.

How much NPC does a stand-alone diesel system cost?

The total NPC for the stand-alone diesel system is \$160,278 which is 3 time higher than PV/battery configuration. The simulation telecom load profile with excess of electricity 2,405 kWh/year.
