Overview

How do I connect the ESS battery controller?

ESS Battery connection Cut of the ring terminals from the premade battery cables included with the ESS Battery Controller. Connect the communication cable from the ESS Battery to the outer port, "CAN 2": Poke holes in the multigrommets and feed Bat+, Bat- and PE cables through the smaller grommets.

Does ESS require battery capacity?

• Battery capacity is no longer required by the Assistant. Instead, enable battery monitor and enter the capacity on the General tab in VEConfigure. ESS design and installation manual Page 24 Comparisons to Hub Assistents.

How does ESS recharge a battery?

• Recharge: ESS will recharge the battery to the minimum SoC limit if it drops more than 5% below the minimum configured SoC. Once the minimum SoC is reached the system once again switches to Discharge disabled. 4.3.11. Limit inverter power Limit the power drawn by the Multi: ie. limit the power being inverted from DC to AC.

How do I use ESS battery life?

- Connect to AC when available, keep batteries charged: Use ESS Assistant and select the "Keep batteries charged" mode. Make use of 'off-peak tariffs' Not available in the ESS System yet, but it will be implemented. Winter mode
- The ESS BatteryLife feature will make sure that the batteries are not unnecessarily cycled around a low SoC.

What is energy storage system (ESS)?

33 1. ESS introduction & features What is ESS?

An Energy Storage System (ESS) is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device

and battery system. It stores solar energy in your battery during the day for use later on when the sun stops shining.

How do I set up an ESS system?

There are a few different ways to set an ESS system up. A combination of these are possible as well: • DC coupled ESS • AC coupled ESS • Energy meter is used • Grid parallel • Essential loads are used See below drawings to get an idea of all possibilities.
