

SolarInvert Energy Solutions

Berlin Photovoltaic Glass Application

Overview

Are glass-glass PV modules a good choice?

Glass-glass PV modules (b) do not require an aluminum frame and therefore have a lower carbon footprint than PV modules with backsheet (a). Although photovoltaic modules convert sunlight into electricity without producing emissions, PV-generated solar energy does produce CO2 emissions during production, transport and at the end of module life.

What is a glass-glass solar module?

Glass-glass solar modules made with insulation glazing can be integrated in glass facades or roof surfaces of heated rooms. Insulation-glazed solar modules also protect the surface from the weather in addition to providing thermal insulation and soundproofing functions with real power: Systems with triple glazing fulfill the passive house standard.

Can a photovoltaic system be installed in a European location?

"If I want to install a photovoltaic system in a European location with average irradiation values, I have a great influence on its climate friendliness with the choice of my PV modules," explains Dr. Holger Neuhaus, Head of Department for Module Technology at Fraunhofer ISE.

What are Solarvolt BIPV glass systems suitable for?

Solarvolt ™ BIPV glass systems can fulfill any building façade need. Tailor-made glass-glass solar modules are particularly suitable for façades and other exterior applications.

What is Photovoltaic Glass?

Photovoltaic (PV) glass stands at the forefront of sustainable building technology, revolutionizing how we harness solar energy in modern architecture. This innovative material transforms ordinary windows into power-generating assets through building-integrated photovoltaics, marking a

significant breakthrough in renewable energy integration.

What are photovoltaic glass façade solutions?

Photovoltaic glass façade solutions, also known as solar glass systems, are ideal for integration in both existing buildings and new construction. They are individually adapted to requirements depending on façade type, façade grid, construction type, building height, and location. These solutions can be produced as both cold and warm façade solutions.
