

## SolarInvert Energy Solutions

# Cambodia Energy Storage Battery

## Overview

---

Can battery energy storage be used to power Cambodia's grid?

“The battery energy storage system will showcase how large-scale deployment of innovative technology applications can be used to operate Cambodia’s grid in the future and generate more renewable power,” commented ADB Country Director for Cambodia Sunniya Durrani-Jamal.

Can solar power be used in Cambodia?

Renewable energy, particularly solar, holds great promise for Cambodia. However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season.

Is a battery energy storage system the future of energy?

The Cambodian Minister of Mines and Energy, Keo Rattanak, is targeting 70% renewable energy by 2030. Battery energy storage systems (BESS) have emerged as a transformative technology in global energy markets, enabling the efficient integration of renewable energy, enhancing grid stability, and providing access to electricity in off-grid areas.

Can solar energy be used intermittently in Cambodia?

However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season. The Cambodian Minister of Mines and Energy, Keo Rattanak, is targeting 70% renewable energy by 2030.

How much money does Cambodia spend on photovoltaic power?

Of the total amount, USD 4.7 million come from the Strategic Climate Fund and USD 2 million from the Clean Energy Fund, both administered by the bank. The government of Cambodia aims to reach 415 MW of installed photovoltaic (PV) power capacity by 2020. In 2019, the country had 155 MW.

Does Cambodia have a power supply?

None currently available. Cambodia has substantially increased power generation capacity while reducing imports from neighboring countries. Domestic power generation has rapidly increased from 8.68 TWh in 2020 to 17.85 TWh in 2024, while imports decreased from 3.06 TWh in 2020 to 1.57 TWh in 2024.
