

**SolarInvert Energy Solutions**

**Can rooftop photovoltaic panels  
be installed diagonally**

## Overview

---

Should you install solar panels on a flat roof?

Consider your options entirely before you install the solar panels. If you have a flat roof, you'll want to install horizontal panels. This orientation keeps the panels flush against the roof. Vertical panels would stick up higher. They would look strange against a flat roof and be at a more extreme angle.

Can solar panels be installed vertically across a roof?

It's possible to maintain a longer row of solar panels when you install them vertically across your roof. So not only are you able to fit more into place, you're not adding as many steel bolts into your roof rafters. Still, you can install solar panels securely.

How are solar panels installed on a roof?

Solar panels are mounted to the rafters on your roof using "rails." Since panels are not as wide as they are tall, it takes fewer rails to install the panels in a vertical orientation than in a horizontal orientation. Less railing means less overall cost!.

Why are solar panels installed in a vertical orientation?

Less railing means less overall cost! The slant and size of your roof allow the panels to fit more efficiently with a vertical orientation. This tends to be the default orientation for many solar installation companies. Why are your panels installed in a horizontal (landscape) orientation?

How many solar panels can be installed on a roof?

With the vertical orientation, you can install two rows of six solar panels because they fit in a compact area. Horizontal panels take up more space, so you'll most likely need to make three rows of four panels to get 12 on your

roof. It also takes more rafters, rows, and bolts to install horizontal solar panels.

What is a vertical solar panel installation?

Vertical solar panel installation is an arrangement of panels that are mounted in a vertical orientation on a rooftop or other structures. This kind of installation is also known as portrait orientation, where panels are positioned flat parallel to the ground, often perpendicular to the roof's surface.
