Canberra new energy battery cabinet cooling modification

Overview

How will Canberra's new battery storage system work?

The large-scale battery storage system will deliver 250 megawatts (MW) of power, store renewable energy and support grid reliability. This is enough energy to power one-third of Canberra for two hours during peak demand periods. Behind-the-meter batteries will be installed to help power essential services across nine government sites.

How will battery storage affect Canberra's electricity grid?

Battery storage will play an increasing role in Canberra's electricity grid as we move towards electrifying our city and achieving net zero emissions by 2045. Wind and solar energy make electricity that large-scale batteries can store. Batteries help support the electricity grid when the sun and wind can't.

Why is the Big Canberra battery project important?

This energy can be saved to use when the sun isn't shining, reducing the site's electricity bills. The Big Canberra Battery project will support a more reliable electricity supply for the ACT. Energy demand can rise and fall throughout the day. Having access to stored electricity can help during peak times.

Can a battery energy storage system fit a closed-loop air conditioner?

A leading manufacturer of battery energy storage systems contacted Kooltronic for a thermal management solution to fit its rechargeable power system. Working collaboratively with the manufacturer, Kooltronic engineers modified a closed-loop air conditioner to fit the enclosure, cool the battery compartment, and maximize system reliability.

Will Canberra's energy supply be future-proofed?

The ACT Government is future-proofing Canberra's energy supply by expanding its renewable energy storage with a new partnership with global specialist energy storage business, Eku Energy, launched by Macquarie's

Green Investment Group.

What does the Big Canberra battery mean for EKU energy?

The Big Canberra Battery represents a significant milestone for Eku Energy as we celebrate our first GWh of battery energy storage in delivery in Australia. This brings our global portfolio of battery energy storage assets to over 4GWh.
