

### **SolarInvert Energy Solutions**

# **China Mobile Energy Storage Site Wind Power**

#### **Overview**

What is the largest combined wind power and energy storage project in China?

This project is currently the largest combined wind power and energy storage project in China. The Inland Plain Wind Farm Project in Mengcheng County is owned by the Anhui Branch of Huaneng International. The project has a total installed capacity of 200MW, with a paired energy storage capacity of 20% and duration of one hour.

Who provides energy storage & wind power in China?

Project engineering, procurement, and construction (EPC) was provided by Nanjing NR Electric Co., Ltd., while the project's container energy storage battery system was supplied by Gotion High-tech. This project is currently the largest combined wind power and energy storage project in China.

Why is new energy storage important in China?

SINGAPORE (ICIS)-New energy storage plays a crucial role in ensuring power balance in China, especially in effectively addressing the intermittent issues of new energy generation. It helps alleviate the dual pressures of power supply security and consumption.

Will China's energy storage manufacturing industry lead the world?

China's energy storage manufacturing industry is already at the forefront of global standards and will continue to lead the industry in advanced power trading and grid integration technologies in the future, said Tian Qingjun, senior vice-president of Envision Group.

How big is China's power generation capacity?

China's installed power generation capacity surged 14.5 percent year-on-year to 2.99 billion kW by the end of March, with that of solar power soaring 55 percent year-on-year to 660 million kW and wind power rising 21.5 percent

year-on-year to about 460 million kW, according to the NEA.

How big is China's energy storage capacity?

The cumulative installed capacity of new energy storage in China is expected to exceed 100 gigawatts (GW) by 2025, according to the Energy Storage Industry Research White Paper 2025 released by the Institute of Engineering Thermophysics on 10 April. The capacity is likely to surpass 200GW by 2030, more than double the 2024 level of 73.76GW.
