Communication Energy Base Station Photovoltaic Power Generation System

Overview

Why do base station operators use distributed photovoltaics?

Base station operators deploy a large number of distributed photovoltaics to solve the problems of high energy consumption and high electricity costs of 5G base stations.

What is a green base station system?

On the other hand, considering the energy use, the concept of a green base station system is proposed, which uses renewable energy or hybrid power to provide energy for the base station system, allowing energy flow between base stations and smart grid , , , .

What happens if a base station does not deploy photovoltaics?

When the base station operator does not invest in the deployment of photovoltaics, the cost comes from the investment in backup energy storage, operation and maintenance, and load power consumption. Energy storage does not participate in grid interaction, and there is no peak-shaving or valley-filling effect.

Can distributed photovoltaics promote the construction of a zero-carbon network?

The deployment of distributed photovoltaics in the base station can effectively promote the construction of a zero-carbon network by the base station operators. Table 3. Comparison of the 5G base station micro-network operation results in different scenarios.

Should 5G base station operators invest in photovoltaic storage systems?

From the above comparative analysis results, 5G base station operators invest in photovoltaic storage systems and flexibly dispatching the remaining space of the backup energy storage can bring benefits to both the operators and power grids.

What is a 5G photovoltaic storage system?

The photovoltaic storage system is introduced into the ultra-dense heterogeneous network of 5G base stations composed of macro and micro base stations to form the micro network structure of 5G base stations.

Communication Energy Base Station Photovoltaic Power Generation

WO2022027281A1

The present invention relates to the field of communications, and in particular to a photovoltaic power generation tracking system for a communication base station without a photoelectric ...
