Communication base station integrated circuit power supply

Overview

Can a 500W switch power supply be used for communication base stations?

Conferences > 2023 4th International Confer. In order to meet the high power and high stability requirements of communication base stations for power supply, this paper designs a dedicated 500W switch power supply for communication base stations.

Can eGaN FETs be used for LTE wireless base station infrastructure?

frequency eGaN FETs for LTE wireless base station infrastructure is presented. The ET synchronous FET bootstrap supply is used. 20 MHz LTE envelope with a 7 dB peak-to-average power ratio (PAPR). diode. In this application, however, a different approach is Modern communication systems demand high data capacity and high speed.

What are the requirements for et power supplies?

To meet the requirements for ET power supplies, devices must operate eficiently at very high frequencies. This requires a device with an excellent hard-switching figure of merit, and also layout and package characteristics that maximize in-circuit performance.

What is a WLSP transistor?

Such devices, the EPC8000 series, are available as wafer level chip scaled packaged (WLSP) GaN transistors with the device pin-out show in Figure 1. A four-phase synchronous buck pulse-width modulated (PWM) topology is selected, as shown in figure 2. The power switches are EPC8010 eGAN FETs.

How much power does a digital logic isolation gate use?

The average output Digital Logic Isolator Gate power is 130 W and the peak value is 680 W, corresponding to 7 dB PAPR. Average power-stage eficiency and total eficiency are 95.0% and 94.3%, respectively. Accurate tracking is achieved with the normalized root-mean square error (NRMSE) of

Communication base station integrated circuit power supply
