

## SolarInvert Energy Solutions

# Communication base station inverter window

## Overview

---

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

Can a window turn a building into a base station?

The product is “the world’s first antenna that turns a window into a base station that can be attached to a building window inside and turn the outdoors into a service area without spoiling the cityscape or the exterior appearance of the building,” says Shota Ochiai, a marketing manager at AGC.

How does a low voltage inverter work?

The data signal is connected to the low-voltage busbar through the power line on the AC side of the inverter, the signal is analyzed by the inverter supporting the data collector, and the communication is finally connected to the local power station management system or the cloud platform through the LAN or the Internet 2. Application scenario 4.

What is a base station?

A base-station is more than just an antenna, and also includes the active electronics feeding the antenna. Buildings may still require rooms with electronics to generate the signal that ends up out at the antenna (although a small cell fed system might reduce room size/qty). This antenna allows flexible placement "remote" of the "base station."

Can glass antennas be used as a base station?

To avoid installing unsightly equipment on more and more shared spaces, Japanese companies are developing transparent glass antennas that allow

windows to serve as base stations that can be shared by several carriers.

Can a base station use a GPS antenna?

That base station will need to be able to use GPS to confirm location, with the SAS (Spectrum Access System) server in the data cloud. We ended up having to extend the GPS antenna via coax cable, through the side of the warehouse wall. Not sure if GPS penetrates through that glass. perhaps try GPS antenna on glass?
