# Comoros household wind power generation system

#### **Overview**

Is there wind power in the Comoros?

: Data not applicable 0 : Data not available (P): Projected The country has no known oil or gas reserves and hence has no upstream sector. The potential for wind power in the Comoros is low. Measurements indicate that wind speeds rarely go above 3 m/s, the average required to drive a wind generator.

How many people in the Comoros have access to electricity?

Just less than 70 per cent of the population of the Comoros has access to electricity: 61.4 per cent in rural areas and 85.1 per cent in urban areas (Table 3 and Figure 4). There are also access disparities between the three islands.

Should Comoros invest in solar energy?

The Comoros has significant potential for the development of photovoltaic energy (\*\*should they invest in it\*\) given its economic situation. Recently, a French company signed a contract with SONELEC to purchase electricity from solar energy for 26 years.

Should Comoros abandon its monolithic energy governance?

Comoros, like many small islands, should consider changing its monolithic energy governance due to its structural heaviness. The territory needs to adapt quickly to face the challenges of transition. Comoros's energy vulnerability is threefold.

Which plants use the most energy in the Comoros?

Key consumption and production statistics are shown in Figures 2 and 3. Biomass (wood and charcoal) is used to provide about 70 per cent of energy use in the Comoros. Other plants being explored for generating biomass energy include oilseed plants, such as coconut, sesame, peanut and Jatropha curcas (REEEP, 2012).

Why does the Comoros have a low wind power density?

The Comoros has a relatively low wind power density, with values mainly distributed between 80 and 270 W/m 2, as indicated by the Global Wind Atlas map [43]. This low potential is also attributed to the minor variability of the topography throughout the three islands of the Comoros archipelago.
