Construction cost per kw of wind and solar energy storage

1075KWHH ESS

Overview

Gas-fired utility construction cost \$820 per kilowatt-hour (kWh) produced in 2022. Solar and wind construction cost \$1,588 and \$1,451 per kWh for the same year. How much does solar cost per kilowatt (kW)?

Discussion of additional cost information and trends is available in our Short-Term Energy Outlook. Solar Average U.S. solar construction costs across all solar panel types increased 1.7% to \$1,588 per kilowatt (kW) in 2022.

How much does it cost to build a wind farm?

The cost of building utility-scale wind farm also rose in 2020, although the average construction expense for moderate-sized projects (100-200 MW) actually fell 5 percent to \$1,531 per kW, making wind about \$120 per kW less expensive than solar.

Do projections overestimate the costs of wind power and solar photovoltaics?

Projections overestimate the costs of wind power and solar photovoltaics (PV) by excluding existing flexibility strategies like dispatchable renewables, demand response, and grid expansion, and by adding inflated integration costs due to low spatial and temporal granularity.

How much did solar cost in 2020?

Average solar construction costs were the only one of the three dominant resources to fall in 2020, decreasing nearly 8 percent to \$1,655 per kilowatt (kW) of capacity. Natural gas-fired CCGT construction costs, meanwhile, increased 22 percent.

What happened to solar photovoltaic construction costs in 2020?

Construction costs for solar photovoltaic systems continued to decrease in the United States in 2020; the capacity-weighted average fell 8% compared with 2019, according to the latest data in U.S. Energy Information Administration 's (EIA) Annual Electric Generator Report on newly constructed utility-scale

electric generators.

How much do solar panels cost in 2022?

Solar Average U.S. solar construction costs across all solar panel types increased 1.7% to \$1,588 per kilowatt (kW) in 2022. The increase was primarily driven by a 13% increase in the construction cost for crystalline silicon tracking panels, which increased to \$1,605/kW, the highest price since 2018.
