# Core Kinetic Energy Outdoor Power Supply

## Overview

---

What is kinetic power & how does it work?

The energy obtained from kinetic power generation can drive smart glasses and smart helmets, or be used as an auxiliary power source for smart headset, in conjunction with batteries for energy supply. The low energy density of wireless charging and sweat power technologies falls short of the energy requirements of most wearable devices.

What is outdoor energy supply for smart wearables?

Sketch of outdoor energy supply for smart wearables. Energy sources that can be utilized outdoors include solar, kinetic, thermal, chemical, and radio frequency energy. The different energy harvesting systems can be installed in different locations, independently or cooperatively to power the devices.

What is diesel rotary uninterruptible power source?

DeRUPS is the abbreviation for Diesel Rotary Uninterruptible Power Source. In this solution, dedicated for emergency power supplies, a system called GenSets is used in combination with a flywheel kinetic energy storage unit (known as PowerBridge). Kinetic energy, produced by rotating flywheels, is stored in a mass storage unit.

Which energy sources can be used for small wearables?

RF energy, thermal energy, and biomass energy have less energy dense and can be used as auxiliary power sources for small wearables. The combination of the energy harvesting system and the micro energy storage unit enables the continuous power supply of wearables in different circumstances of daytime, nighttime, indoor and outdoor.

Which energy generation technologies are suitable for outdoor sports wearables?

Solar and kinetic energy generation technologies have higher energy density

and are suitable for application in outdoor sports wearables. RF energy, thermal energy, and biomass energy have less energy dense and can be used as auxiliary power sources for small wearables.

What is the output performance of kinetic energy harvesting power generation technology?

The output performance of kinetic energy harvesting power generation technology is good, with current power output up to 5 W and power density up to 10 W/kg . However, continuous deformation friction and reuse are huge challenges that require continuous optimization of manufacturing methods and structural design.
