

## SolarInvert Energy Solutions

# Distance between battery cabinet and equipment

## Overview

---

- The distance between battery containers should be 3 meters (long side) and 4 meters (short side). If a firewall is installed, the short side distance can be reduced to 0.5 meters. Where should a battery cabinet be installed?

The battery cabinet must be installed adjacent to the power cabinet. The following diagram shows the equipment layout for a typical new indoor Macrocell site. Notes: The cabinets may be placed with zero clearance to the rear wall. The cabinets may be placed with zero clearance to the side wall, however some clearance is recommended.

What are the requirements for a battery installation?

1. Space Planning and Layout 900mm min Battery Room Layout 1200mm Primary Access End Access 1000mm Battery Racks Industrial battery installations require adequate spacing for maintenance, ventilation, and safety. The layout should accommodate: 2. Structural Requirements.

What are the requirements for a battery layout?

The layout should accommodate: 2. Structural Requirements Floor loading capacity is critical - industrial batteries typically weigh 1500-3000 kg/m<sup>2</sup>. For VLA (flooded) batteries, acid-resistant floor coatings compliant with AS/NZS 2430.3.2 are required.

What is the minimum space between ezbf frame and UMTS macrocell cabinet?

Minimum space between the EZBFi frame and the adjacent cabinet or frame is 57 mm (2.24 in.) (if the edge of the template is cut at the dotted line). The following diagram shows the clearance requirements for the indoor UMTS Macrocell cabinet from the top of the cabinet to the cable rack and from the top of the cable rack to the ceiling.

What are the minimum clearance requirements for a base station?

Minimum clearances must be maintained between the cabinets and surrounding building parts/cabinet to accommodate the installation and maintenance of the base station. The following constraints must be considered for cabinet clearances:
