

## SolarInvert Energy Solutions

# Does the solar water pump have a shelf life

## Overview

---

Solar water pumps, a key part of sustainable water solutions, typically last between 10 and 20 years. That can vary depending on how you use and take care of your pump. How long do solar pumps last?

If the water level shut-off is used to shut off the pump when the tank is full, hours of runtime are saved on the motor, extending pump life. We have customers who have run our solar pumps for more than 10 years without maintenance. Water quality and a proper installation are key factors in how long the pumps will last.

Are solar water pumps worth it?

Absolutely! Solar water pumps are known for their reliability over the years. With fewer moving parts compared to traditional pumps, they require less maintenance. Plus, with solar panels lasting 25-30 years, you're looking at a long-term solution for your water supply needs.

What makes a solar water fountain pump last?

Corrosion resistance is invaluable to the longevity and integrity of a solar water fountain pump. The solar-powered fountain pump will be spending a lot of time around or in water, and without some form of corrosion resistance, it won't be long before it goes bad.

How long does a water pump last?

Some customer are running the pump 24/7, 7 days a week which will shorten the observed lifetime of the system. The vast majority of our customer are using the pumps 6-8 hours per day, or intermittently, which is normal use and should result in a normal lifespan.

Do solar well pumps have a warranty?

All of our solar well pumps have a two year warranty. If anything happens within 2 years, we will immediately send out replacement parts. All of our kits

also come standard with an extra helical rotor pumping mechanism. In most cases it is not needed, however dirty or sandy wells can cause wear on the gasket.

Can a solar pump freeze a pond?

Just be sure your pond or creek can keep up with your desired water demand. Freezing issues may arise if improperly installed. We also advise you to encase the solar pump in a filtration box or float the pump to ensure it is not pumping debris from the bottom of the water source. This can cause your pump to wear down fast and lead to repairs.
