# East Africa Communication Base Station Lead-acid Battery Maintenance Project

### **Overview**

How are lead-acid batteries regulated in Africa?

Disposal of the more common lead-acid batteries is regulated to varying degrees across Africa. In Kenya for example, the national environmental authority is the regulator on battery disposal. Developers can apply and get a licence to dispose of batteries itself, but the developer would require a recycling plant.

Why do African companies choose lithium-ion technology over lead acid batteries?

These companies shift the cost of technology ownership from end-consumers to the company. These companies often can access long term credit at more competitive rates than typical African consumers or businesses. As a result, they typically opt for lithium-ion technology over lead acid batteries.

Who makes lithium ion batteries in South Africa?

China is the leading manufacturer of both lead-acid and lithium-ion batteries used in SSA. There are a few examples of lithium-ion battery assembly in South Africa, with Freedom Won, Blue Nova and Solar MD currently assembling batteries for use in local markets.

How successful is the recycling of lead-acid batteries?

The recycling of lead-acid batteries is relatively successful, with very high shares of all batteries collected and sent for refurbishment or recycling. This is in part due to the profitable nature of lead recovery and recycling for batteries.

Do batteries reduce fossil fuel use in Sub-Saharan Africa?

Battery Type | DNV - Report, 23 Sep 2021 Final Report | L2C204644-UKBR-D-01-E Techno-economic analysis of battery energy storage for reducing fossil fuel use in Sub-Saharan Africa 74 Another insight from this dataset is that

batteries are used predominantly in residential and commercial applications.

Why are lead acid batteries prone to corrosion?

The external parts of lead- acid batteries (terminals, lugs, connectors) are also prone to corrosion resulting from chemical reactions and limited box ventilation. Decommissioning and disposal of battery components, especially some lead compounds, is critical as many of these are highly toxic.
