

SolarInvert Energy Solutions

Eastern Europe has many energy photovoltaic sites

Overview

Eastern Europe has seen exponential growth in its solar sector in recent years, with three of the five countries which exceeded 1GW of installed solar capacity in Europe in 2023 – Bulgaria, the Czech Republic and Romania – all in the east. Which European countries have the most solar energy?

The age of solar energy is dawning in Eastern Europe: According to the European industry association SolarPower Europe, Poland has been one of the top ten leading countries in Europe in terms of PV deployment since 2016. Hungary has joined the list after adding 1.6 gigawatts (GW) of PV capacity in 2023, a 45 percent increase over the previous year.

Is Eastern Europe a good place to invest in solar?

Eastern Europe is set to be pivotal in the solar industry, given its cost advantages and growth potential. Solar's affordability and accessibility make it ideal for achieving the region's decarbonisation targets. Already, we see substantial project development across the Baltics, Balkans, Bulgaria, Romania and other areas.

Is Eastern Europe a promising market for solar energy deployment?

Eastern Europe indeed represents a promising market with untapped potential in solar energy deployment, given its early-stage market development. Solar energy, being highly competitive and increasingly cost-effective, is expected to play a key role in the region's energy future.

Where does solar power come from in Europe?

Eastern Europe is often overlooked in discussions about solar power generation in Europe, where the likes of Germany and Spain dominate the growth in deployed solar electricity production.

Why is Eastern Europe getting more solar power?

The country's total solar power output increased dramatically, by 970

megawatts (MW) to be exact. The PV boom in Eastern Europe is driven by a desire for greater energy independence and a commitment to environmental and climate targets. Other key drivers are cost efficiency, technological advances and subsidy policies.

Does RWE have a solar portfolio in Poland?

RWE began construction on a new solar portfolio in Poland last month. Image: RWE Eastern Europe has seen exponential growth in its solar sector in recent years, with three of the five countries which exceeded 1GW of installed solar capacity in Europe in 2023 – Bulgaria, the Czech Republic and Romania – all in the east.
