Overview

Where does solar power come from in Europe?

Eastern Europe is often overlooked in discussions about solar power generation in Europe, where the likes of Germany and Spain dominate the growth in deployed solar electricity production.

Is Eastern Europe a promising market for solar energy deployment?

Eastern Europe indeed represents a promising market with untapped potential in solar energy deployment, given its early-stage market development. Solar energy, being highly competitive and increasingly cost-effective, is expected to play a key role in the region's energy future.

Is Eastern Europe a good place to invest in solar?

Eastern Europe is set to be pivotal in the solar industry, given its cost advantages and growth potential. Solar's affordability and accessibility make it ideal for achieving the region's decarbonisation targets. Already, we see substantial project development across the Baltics, Balkans, Bulgaria, Romania and other areas.

Does RWE have a solar portfolio in Poland?

RWE began construction on a new solar portfolio in Poland last month. Image: RWE Eastern Europe has seen exponential growth in its solar sector in recent years, with three of the five countries which exceeded 1GW of installed solar capacity in Europe in 2023 – Bulgaria, the Czech Republic and Romania – all in the east.

Which country generates the most electricity from solar photovoltaics?

In 2024, Germany was the country with the highest electricity generation from solar photovoltaics, amounting to more than 74 terawatt-hours. That is roughly one-fourth of the total generation in the European Union.

How much solar power does the EU produce?

The production volume of electricity from solar photovoltaic power in the European Union has been steadily increasing in the last years. In 2024, the EU's solar PV power production stood at over 296 terawatt-hours.
