Electric energy storage cost per kilowatt-hour

Overview

What are energy related costs?

Energy related costs include all the costs undertaken to build energy storage banks or reservoirs, expressed per unit of stored or delivered energy (€/kWh). In this manner, cost of PCS and storage device are decoupled to estimate the contribution of each part more explicitly in TCC calculations.

How long does an energy storage system last?

The 2020 Cost and Performance Assessment analyzed energy storage systems from 2 to 10 hours. The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations.

What is the cheapest energy storage system?

In terms of TCC (total capital cost), underground CAES (with 890 €/kW) offers the most economical alternative for bulk energy storage, while SMES and SCES are the cheapest options in power quality applications. However, the cost data for these electro-magnetic EES systems are rather limited and for small-scale applications.

Are mechanical energy storage systems cost-efficient?

The results indicated that mechanical energy storage systems, namely PHS and CAES, are still the most cost-efficient options for bulk energy storage. PHS and CAES approximately add 54 and 71 €/MWh respectively, to the cost of charging power. The project's environmental permitting costs and contingency may increase the costs, however.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations

and reduced use of materials.

How much does it cost to store a battery?

However, electrochemical batteries show higher costs for storage compartment (up to 800 €/kWh for Li-ion). Hydrogen-based and underground CAES have lowest costs of storage, 4 and 40 €/kWh, respectively. More details of the cost elements are presented in Appendix A for each technology.
