

SolarInvert Energy Solutions

Electrochemical Energy Storage Power Station in New York USA

Overview

Does New York State need a new energy storage system?

The company told the PSC that the proposed project advances New York State's goals for greenhouse gas emissions reduction and renewable energy expansion mandated by the Climate Leadership and Community Protection Act that requires the state to install 3,000 MW of energy storage capacity by 2030.

Why are stationary battery energy storage systems important?

The growing popularity of electric vehicles requires greater energy and power requirements—including extreme-fast charge capabilities —from the batteries that drive them. In addition, stationary battery energy storage systems are critical to ensuring that power from renewable energy sources is available when and where it is needed.

How will Astoria contribute to New York's energy storage policy?

The utility has been handed a state mandate to deploy 300MW / 1,200MWh of energy storage on its networks by 2030 – its contribution to New York's 3,000MW by 2030 policy target – and the Astoria system, dubbed the East River Energy Storage System, will make a significant contribution towards it.

What is the Luyster Creek Energy Storage Project?

The first energy storage facility will be called the Luyster Creek Energy Storage Project and it will be located at the existing Astoria Generating Station in Astoria, Queens. The project is comprised of two distinct installations with four-hour batteries and a total capacity of 135 MW or 540 MWh, according to the PSC petition.

Does Astoria have a power plant in New York City?

Astoria Generating Company, an Eastern Generation subsidiary, owns and operates three power plants in New York City: the Astoria Generating Station

and the Gowanus and Narrows Generating Stations, both located in Sunset Park, Brooklyn, which have an aggregate summer net capacity rating of 1,787.7 MW and a winter net capacity rating of 2,039.4 MW.

What are California's large-scale battery projects?

Two large-scale, 100MW, 4-hour (400MWh) battery projects have come online this year in California which expressly took over the role of peakers on the grid, Saticoy and Alamitos .
