Energy Storage Project Implementation and Delivery Plan

Overview

This Energy Storage Best Practice Guide (Guide or BPGs) covers eight key aspect areas of an energy storage project proposal, including Project Development, Engineering, Project Economics, Technical Performance, Construction, Operation, Risk Management, and Codes and Standards. How do I deploy an energy storage system?

There are many things that must be considered to successfully deploy an energy storage system. These include: Storage Technology Implications Balance-of-Plant Grid integration Communications and Control Storage Installation The following sections are excerpts from the ESIC Energy Storage Implementation Guide which is free to the public.

What are energy storage specific project requirements?

Project Specific Requirements: Elements for developing energy storage specific project requirements include ownership of the storage asset, energy storage system (ESS) performance, communication and control system requirements, site requirements and availability, local constraints, and safety requirements.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

How can energy storage products be integrated?

Integration of energy storage products begins at the cell level and manufacturers have adopted different approaches toward modular design of internal systems, all with the goal of improving manufacturing efficiencies, reducing maintenance time and improving operational reliability.

What topics are included in the ESIC energy storage implementation guide?

These include: Storage Technology Implications Balance-of-Plant Grid integration Communications and Control Storage Installation The following sections are excerpts from the ESIC Energy Storage Implementation Guide which is free to the public. The full report includes a more detailed discussion of these topics.

Do energy storage systems need to be listed?

It is critical for projects moving forward that execution teams understand that the International Fire Code (IFC), NFPA 855 and NFPA 70 (the National Electric Code) require energy storage systems to be listed, and that UL 9540 is the listing standard applicable.
