Energy storage container charging pile installation

Support Customized Product

Overview

Where should a charging pile be installed?

Standalone charging piles should be installed at least 2 meters away from buildings, fixed posts, trees, and other obstacles. The ground must be level to ensure a stable foundation. Before installation, a professional electrician should handle the wiring, and grounding protection should be considered.

What are energy storage charging piles?

By balancing the electrical grid load, utilizing cost-effective electricity for storage, and supporting renewable energy integration, energy storage charging piles enhance grid stability, charging economics, and environmental performance.

How to install outdoor charging piles?

Necessary rain-proof and dust-proof measures should be taken for outdoor charging piles (such as membrane structure canopies). 1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room.

How to install a wall-mounted charging pile?

Wall-mounted charging piles require the wall to support the weight and vibrations of the equipment. The installation position should be chosen based on the wall's quality and the height of the pile head. The wall material must be appropriate, and the ground should be level. Installation also requires a professional electrician for wiring.

How to install charging equipment?

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation.

What are the charging pile instructions?

Instructions for Charging Pile-V1.3.0: Power Output Mode: Can be switched between intelligent mode and priority mode. In intelligent mode, the charging pile power is equally distributed between the two vehicle connectors.
