

#### **SolarInvert Energy Solutions**

# **Energy storage cooling system** in Manchester UK

#### **Overview**

How much heating & cooling can Ates supply in the UK?

Proportion of UK heating and cooling demand that could be supplied using ATES The results of our Monte-Carlo analysis show that ATES could supply up to 190 GWh t h /yr/km 2 of heating, with a mode of 25 GWh t h /yr/km 2 (Fig. 12 a).

What is the potential for the UK heating and cooling industry?

Low UK uptake: 11 systems supply <0.01% national heating and <0.5% cooling demand. Large growth potential to supply ca. 61% of UK heating and 79% of cooling demand. Could reduce CO 2 emissions by 13%–41% for heating compared to rival technologies. Potential for exceptional reductions of 70%–94% in CO 2 emissions for cooling.

Is Manchester energy planning a large-scale 5mw/15mwh project?

The company has had a smaller-scale 5MW/15MWh project operational, also in Manchester, since 2018. It first revealed plans for a large-scale project in Carrington in 2019 which the then-CEO told Energy-Storage.news would start construction the following year.

Could Ates be the future of heating and cooling in the UK?

Widespread deployment of ATES in conjunction with decarbonisation of UK electricity generation could deliver heating with a carbon intensity that is 95% lower than the present day by 2030, with 41% lower grid demand than ASHP, and supply the UK's rapidly increasing demand for cooling with almost zero operational CO 2 emissions.

Which buildings have ATES systems in the UK?

Buildings that have been equipped with ATES systems in the UK are mostly large, new-build residential developments, but also include a shopping centre, offices/work space and part of a museum. Most installations deliver <1 MW t h

heating and cooling via a single well doublet and are bivalent, supplying part of the heating/cooling demand.

What is underground thermal energy storage (Utes)?

Storage of sensible heat in the subsurface is termed Underground Thermal Energy Storage (UTES). Waste heat from buildings, industrial processes or excess renewable energy generation in the summer can be stored in the subsurface and used for heating in the winter.

#### **Energy storage cooling system in Manchester UK**

## World first grid-scale liquid air energy storage ...

Jun 5, 2018 · The UK's energy storage sector took "a great step forward" after completing what is thought to be the world's first grid-scale liquid air energy
