# **Energy storage power station development needs**

#### **Overview**

What is the operation strategy of energy storage power station?

Therefore, under the new energy situation, studying the operation strategy of energy storage power station in the power market environment is the need of the current development of energy storage technology, and it is also the urgent need of energy and power technology in the new situation.

Why do we need pumped storage power stations?

The operation of pumped storage units improves the penetration rate of renewable energy, gives play to the advantages of complementary units, and improves the economic feasibility of the power grid system. Pumped storage power stations in different regions have different development modes.

What are the development models of pumped storage power stations?

According to the different stages of the development of the power market, this paper puts forward the corresponding development models of pumped storage power stations, which are successively the "two-part price system" model, the "partial capacity fixed compensation" model, and the "completely independent market participation" model.

What factors affect the economic benefits of pumped storage power stations?

In addition, under the three development models, the three factors of capacity electricity price, capacity ratio covered by approved electricity price, and energy conversion efficiency also impact the economic benefits of pumped storage power stations. pumped storageprice mechanismdevelopment modelsoperating strategy 1. Introduction.

How much electricity does a pumped storage power station generate?

Within 5 years, the pumped storage power station will pump 2.09 billion kWh of electricity annually and generate 1.682 billion kWh of electricity annually. Figure 5. Power consumption/power generation of the pumped storage power

station during 2018-2022 (billion kWh). The typical daily operation strategy of the power station is shown in Figure 6.

How to determine the operation strategy of a pumped storage power station?

When formulating the operation strategy of the power station, reference can be made to the operation data reported by the power station for the five years from 2018 to 2022. The power consumption and power generation of the pumped storage power station during this period are shown in Figure 5.
