

SolarInvert Energy Solutions

Energy storage project meetingplan

Overview

What is a typical energy storage deployment?

A typical energy storage deployment will consist of multiple project phases, including (1) planning (project initiation, development, and design activities), (2) procurement, (3) construction, (4) acceptance testing (i.e., commissioning), (5) operations and maintenance, and (6) decommissioning.

What if a developer wants to install energy storage?

If a developer wants to install an energy storage project in a jurisdiction that has not defined where storage is allowed, the developer is responsible for identifying a potential site and petitioning the jurisdiction to issue a conditional use permit or rezone the site to enable the project.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Are energy storage projects conflicting with other land uses?

Since 2015, the amount of utility-scale energy storage installed in the U.S. has grown at an average rate of 75 percent per year. Since 2020, the annual growth rate is 134 percent (including planned installations for 2023). As storage projects proliferate in the U.S., the potential for them to come into conflict with other land uses increases.

What are energy storage safety gaps?

Energy storage safety gaps identified in 2014 and 2023. Several gap areas were identified for validated safety and reliability, with an emphasis on Li-ion system design and operation but a recognition that significant research is

needed to identify the risks of emerging technologies.

Who manages energy storage assets?

The energy storage asset owner may manage maintenance of a system themselves or they may outsource it to a third-party company (especially for geographically distributed sites).
