# Factory price bus tie breaker in Toronto

#### **Overview**

#### What is a bus tie breaker?

In electrical distribution systems, a bus tie breaker is used to connect two sections of an electrical bus serving different power sources. Bus tie breakers are usually open, keeping the two sections separate. When one power source fails, the tie breaker can be closed to maintain service through the section, avoiding a planned service outage.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents.

Where can I buy a new circuit breaker?

Rev-Amp Electrical distributes new, surplus, used, and obsolete circuit breakers, switchgears, switchboards, and bus plugs online. Shop top brands like Eaton, Cutler-Hammer, GE, Square D, Schneider, Siemens, and Federal Pioneer to revamp your electrical solutions.

How does a bus circuit breaker work?

When a fault occurs on a bus, the bus section circuit breaker is opened, separating the bus into two sections. This isolation limits the impact of the fault, ensuring that only a portion of the loads loses power while allowing for continued operation of the unaffected sections.

Why should a tie breaker be separated when not in use?

Keeping the two sections separated when not in use is important for several reasons. Firstly, it allows for redundancy in the system. If one power source fails, the tie breaker can be closed to bring in the second power source to supply the entire load. This ensures that there is no disruption to the critical

load.

Where can I find Thomas bus parts?

The Bus Centre offers a complete line of Thomas body and Freightliner chassis parts, along with related parts and accessories for many other brands such as Starcraft, Diamond Coach and Collins. We can also help you find parts for all bus makes.
