# Fire protection requirements for energy storage power station equipment

#### **Overview**

What are the fire protection requirements for a substation building?

The substation building shall include the following fire protection requirements: a. CO2 extinguishing system be designed in accordance with NFPA 12 as a total flooding system, which shall provide complete coverage throughout the building and beneath the raised floor if applicable. b.

Should explosion prevention systems be installed in a room?

For the Designer/Installer If there are enough batteries in a room to create an explosive atmosphere, then explosion prevention systems or deflagration venting should be installed per NFPA 68, Standard on Explosion Protection by Deflagration Venting, and NFPA 69, Standard on Explosion Prevention Systems.

Do I need a sprinkler system for a battery ESS?

A: Testing has shown that water is the most efective agent for cooling for a battery ESS. For this reason, a sprinkler system designed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, is required by NFPA 855, Standard for the Installation of Energy Storage Systems.

How do ESS fire protection systems work?

These layers of protection help prevent damage to the system but can also block water from accessing the seat of the fire. This means that it takes large amounts of water to efectively dissipate the heat generated from ESS fires since cooling the hottest part of the fire is often dificult.

Which sprinkler system complies with NFPA 13?

A sprinkler system that complies with NFPA 13, Standard for the Installation of Sprinkler Systems, should be installed in buildings where an ESS is installed. A BMS is a critical system that should be used in an ESS to monitor, control, and optimize performance of an individual or multiple battery modules in an ESS.

Why do we need energy storage systems?

Growing concerns about the use of fossil fuels and greater demand for a cleaner, more eficient, and more resilient energy grid has led to the use of energy storage systems (ESS), and that use has increased substantially over the past decade.
