

SolarInvert Energy Solutions

Floating photovoltaic power station generator

Overview

What is floating solar power plant?

Abstract: Floating solar power plant is an innovative approach of using photovoltaic modules on water infrastructures to conserve the land along with increase in efficiency of the module. Additionally, the water is also conserved due to reduction in evaporation of water from the water body.

What is a Floating photovoltaic?

Floating photovoltaics refers to photovoltaic power plants whose modules are mounted on floating bodies of water or on the sea. They generate solar power without occupying valuable land areas. In Germany, flooded open-cast mining areas, gravel pits and, in some cases, reservoirs can be considered.

What is a floating solar system?

Floating solar systems make it possible to use artificial water surfaces to generate electricity without using valuable land. Floating photovoltaics refers to photovoltaic power plants whose modules are mounted on floating bodies of water or on the sea. They generate solar power without occupying valuable land areas.

What is floating PV system?

Floating PV system is an innovative and new approach of installing PV modules on water bodies. By installing FPV system, evaporation of water from water bodies can be reduced to 70% and power gain is increased by 5.93% due to back water cooling of PV modules.

Can floating solar power plant reduce water evaporation?

The efficiency of floating solar plant is 11% higher and reduces the water evaporation by 70%, however the investment of such power plant is 1.2% times higher than the conventional solar power plant. 11. Remote sensing and GIS based techniques can be used to determine the potential of floating solar

PV projects.

What was the first floating power generating plant with a water base?

"Jacona" powership was the first floating power generating plant with the water base [6, 7]. The origin of the floating solar PV systems takes us to the US patent filed in the year 1980 that uses the same concept of floating solar technique but for the generation of steam .
