Greek wind power generation system

Overview

Greece connected to the grid 542.8 MW of wind farms in 2023, bringing its cumulative installed wind power generation capacity to 5,226 MW, the latest statistics by the Hellenic Scientific Association of Wind Energy (ELETAEN) show. How much wind power does Greece produce?

Wind power capacity in Greece increased by 230MW in 2022. Greece produces 10.7 TWh from wind energy, which accounts for 20.2% of the country's electricity consumption. The national target for renewable energy for 2030, as set in the National Plan for the Energy and the Climate, projects a 66% RES share in electricity production by 2030.

Does Greece have a wind power market?

According to GlobalData, wind power accounted for 20% of Greece's total installed power generation capacity and 23% of total power generation in 2023. GlobalData uses proprietary data and analytics to provide a complete picture of this market in its Greece Wind power Analysis: Market Outlook to 2035 report. [Buy the report here.](#)

Is there a wind power market in Greece?

Electricity generation from renewable energy sources (RES) in Greece is regulated by the energy law 2244/94 which provides incentives to attract private investments in the RES sector. The wind energy sector is highly attractive due to the verified large wind potential in many regions of the country.

How is wind energy research funded in Greece?

In Greece, R&D activities in wind energy are funded mainly through EU and national programs. A significant funding tool for applied research in Greece is the Program for Research, Technological Development and Innovation, "EREVNO", which is co-funded by the Greek state and the European Regional Development Fund.

How many wind turbines are there in Greece?

ge (284 MW). A total of 128 new wind turbines with an average nameplate capacity of 2.67MW were installed. Aside from natural gas, wind energy remains the biggest domestic energy source for the Greek Electricity system, providing 18.9% of it.

Why are wind energy applications near the upper limit in Greece?

According to the analysis provided it is obvious that the wind energy applications in Greece are near their upper limit due to the existing technical barriers and the stochastic behaviour of the wind.
