Havana Photovoltaic Glass Processing Plant

Overview

How much does a PV system cost in Cuba?

For newly constructed utility-scale PV systems, the LCOE ranges between 2.95 and 5.86 €Cents/kWh, whereas for less than 7.5 €Cents/kWh almost all newly installed large rooftop PV systems can generate electricity in Cuba.

Will Cuba get more solar energy by 2030?

By 2030, the country aims to generate more than a third of its electricity from solar parks and other renewable sources. Cuba on Friday unveiled a new solar energy park in the capital Havana, part of an ambitious project to alleviate the communist island's increasingly desperate struggle with power blackouts.

What's going on with Cuba's power supply?

The dire state of Cuba's power generation infrastructure, largely dependent on oil from Venezuela, has seen the country of 10 million people struggle with near daily outages in some regions in recent months. In some provinces, electricity access is limited to a few hours a day.
