# How much electricity can wind farm energy storage store

#### **Overview**

Writing in the March 19 online edition of the journal Energy & Environmental Science, Dale and his Stanford colleagues found that, from an energetic perspective, the wind industry can easily afford lots of storage, enough to provide more than three days of uninterrupted power. Can wind energy be stored on demand?

A big challenge for utilities is finding new ways to store surplus wind energy and deliver it on demand. It takes lots of energy to build wind turbines and batteries for the electric grid. But Stanford scientists have found that the global wind industry produces enough electricity to easily afford the energetic cost of building grid-scale storage.

Do wind turbines have battery storage?

Some newer turbine models are starting to experiment with battery storage, but it's not very common yet. At the moment, wind turbines store energy by sending it to the grid, and it is stored on the grid if there is an excess of energy, Contrary to popular belief, electricity itself can't be stored.

Do wind farms need energy storage capacity?

Considering the economic benefits of the combined wind-storage system and the promotion value of using energy storage to suppress wind power fluctuations, it is of great significance to study the optimal allocation of energy storage capacity for wind farms.

How do wind turbines store energy?

At the moment, wind turbines store energy by sending it to the grid, and it is stored on the grid if there is an excess of energy, Contrary to popular belief, electricity itself can't be stored. Instead, it's converted to other forms of energy, like heat or chemical energy, which can be stored and used later to generate electricity.

Why is energy storage important in wind farms?

In wind farms, the energy storage system can realize the time and space transfer of energy, alleviate the intermittency of renewable energy and enhance the flexibility of the system. However, the high cost limits its largescale application.

Can wind farms extend the service life of self-built energy storage?

Taking full account of the demand of wind farms to extend the service life of self-built energy storage and suppress wind power fluctuations, an optimization model of wind farm capac-ity configuration based on CES service is established. Through theoretical analysis and case studies, the following conclusions can be drawn:
