

### **SolarInvert Energy Solutions**

# How to check the inverter of local communication base station

#### **Overview**

How do I know if a BMS is communicating with an inverter?

The following checklist is to confirm whether the communication between the BMS and the inverter has been established: More details are outlined below: Observe if the inverter reacts to the BMS charge stop. Observe if the inverter reacts to charge limiting. Observe if the inverter reacts to the discharge stop.

What data should be recorded during the inverter testing process?

Record inverter testing data: During the inverter testing process, record various parameters, such as input/output voltage, current, power and waveform quality, in order to analyze the performance state of the inverter.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

How do I check if a CANbus inverter is compatible with a BMS?

On Hardware > Integration, make sure the Rx/Tx for CANbus monitoring is incrementing — this means that the inverter has successfully established communication with the BMS and that the BMS acknowledges the inverter. 2. Battery Temperature.

What is inverter testing?

Objectively observing and testing the performance of the inverter, using the inverter testing tools reasonably, and paying attention to the precautions in the inverter testing can effectively detect the working efficiency of the inverter, discover and solve problems in time, and improve the service life of the inverter.

Why is inverter interface testing important?

Inverter interface testing is crucial to determine if the BMS and the inverter equipment work correctly. Interface testing is essential because of the following reasons:

### How to check the inverter of local communication base station
