# How to make a base station power module

#### **Overview**

What should I consider when building a DIY solar power station?

One important factor to consider when building this DIY solar power station: Since I've gone with a flooded lead-acid battery, it is extremely important to not drain the capacity past 50%. This is due to something called depth of discharge (D.O.D).

What battery does my DIY power station use?

My DIY power station has 1,464 watt hours of energy using a 122 amp hour flooded lead-acid battery from Wal-Mart. This battery is no longer available, however you will find alternative 100 amp hour AGM and LiFePO4 batteries linked below.

What can you do with a base station?

There's plenty of fun things you could achieve with such a base station: reverse-engineering of proprietary technology, security research, and probing for vulnerabilities through WWAN interfaces rarely considered as an attack surface. Maybe you could even set up your own cell network — if you ever go sailing in neutral waters, that is.

What supplies do I need for a DIY solar power station?

Fuse Block USB Socket Panel (I Purchased 2) Main On/Off Switch Battery Capacity Monitor SAE Solar Socket 10 AWG Wire Heavy Duty Velcro The next supplies I already had. Here are links to similar products: 16 AWG Primary Wire Ring Connectors Now that you've gathered everything you need for your DIY solar power station, it's time to get building!.

Should I use a flooded battery for my power station?

Keep in mind, if you choose to build your power station with a flooded leadacid battery like mine, you should never use more than 50% of its capacity to avoid damaging your battery. Consensus: Go with an AGM or LiFePO4 battery

to get much higher performance. See the Important Note section of this page for more information on D.O.D.

Do you need a 2G base station?

As such, grab your Faraday cages and lead-lined fridges, and make sure that you don't cause any illegal interference if you do end up exploring this path. We've generally seen 2G base stations over the years, but with the sunset of 2G, those have only been useful in an increasingly low number of countries, and, every once in a while, a hacker camp.
