#### **Overview**

Where is Huawei's smart string grid-forming ESS platform used?

Huawei's Smart String Grid-Forming ESS Platform has been successfully implemented in the world's first 100% renewable microgrid, The Red Sea destination, in Saudi Arabia, as well as in multiple 100 MWh string grid-forming energy storage plants.

What is Huawei digital power ESS safety?

Huawei Digital Power has developed end-to-end technical capabilities in ESS safety, spanning from materials to intelligent sensing, cells to grids, and architecture design to safety protection. 1.

What is Huawei smart string ESS?

It is powered by a 50 MW/100 MWh Huawei grid-forming Smart String ESS solution, which has been verified through performance tests to have excellent grid-forming capabilities, compatibility with various types of power supplies, and parallel operation capabilities of multiple devices.

What makes Huawei ESS so safe?

Huawei prioritizes the safety design of battery packs, the core component of an ESS. Each battery pack is encased in metal, and equipped with positivepressure oxygen blocking and directional smoke exhaust mechanisms which prevent the spread of thermal runaway, minimizing risks. 3.

What is Huawei digital power?

Huawei Digital Power is dedicated to enhancing the safety and stability of renewable integration by combining digital and power electronics technologies, leveraging technical experience, and collaborating with global power companies, grid enterprises, and electricity providers.
