

SolarInvert Energy Solutions

13 battery bms

Overview

When the battery capacity of the electric car is no longer sufficient for longer journeys, it can be replaced with a newer battery in better condition. But why not use the old one to supply or back up electricity to your house?

In combination with solar panels, a hybrid inverter and the 1PS.

We offer retrofitting your i3 battery with 1PS BMS or providing complete i3 battery storage with battery packs from our partners. Each of our battery packs is thoroughly inspected.

The original BMS system is removed from the battery and replaced with a 1PS BMS system that fits exactly in the original positions and allows the use of open communication.

Does BMW i3 have a battery management system?

BMW equipped the i3 with a very robust BMS (Battery Management System). Although your gauge may say 100%, the BMS controls the actual charge of the battery. I'm an 80% kinda guy.

Could a new battery pack double the range of a BMW i3?

Fortunately, there's a promising solution on the horizon. Enter Martigi Manufacturing (MTG), a Chinese company that's stepping up to address the range limitations of older BMW i3 models. MTG claims to have developed a battery pack that can effectively double the driving range of the original 60 Ah i3.

Does the BMW i3 have a MTG battery?

The MTG battery is designed to be compatible with the BMW i3's original charging system, including the 50 kW DC fast charging capability. This means you can use the same charging stations and experience similar charging speeds as with the original battery, but with a significantly increased range.

Does i3 battery balancing work?

However, the mi3 smartphone app showed that the charge levels of all 96 battery cells were almost identical, so the i3's passive charge level balancing works well even when usually charging to ~80%.

Does MTG have a new battery pack for i3?

MTG claims to have developed a battery pack that can effectively double the driving range of the original 60 Ah i3. This isn't just a replacement; it's a significant upgrade compatible with all i3 versions, even surpassing the capabilities of the largest factory-installed pack.

Does i3 BEV lose battery capacity?

I bought a 2014 U.S. i3 BEV new. After about 7 years and less than 13k miles, its 60 Ah battery pack had lost about 25% of its new nominal usable capacity. I replaced the 2014 with a used 2019 BEV (I'm the third owner). After almost 4 years and ~32k miles, its 120 Ah battery pack shows no signs of capacity loss.
