

### **SolarInvert Energy Solutions**

# Indonesia s photovoltaic energy storage policy

#### **Overview**

The government of Indonesia has launched a programme that aims to build 100GW of solar PV and 320GWh of BESS in the coming years, mostly distributed across smaller projects in rural areas. Will Indonesia achieve 77 GW of solar PV capacity by 2030?

IESR Executive Director Fabby Tumiwa explained that Indonesia needs to achieve 77 GW of solar PV capacity by 2030, equivalent to 9-15 GW per year between 2024 and 2030, in order to align with the global target of tripling renewable capacity by 2030 to limit global temperature rise to 1.5°C, as per the Paris Agreement.

Can solar power be used in residential buildings in Indonesia?

The use of solar PV system in Indonesia has expanded to various field and area. One example is residential buildings in urban areas. This article discusses calculation methods for designing a solar power generation system that is applied to residential buildings, such as homes, offices, or colleges.

How much solar power does Indonesia have?

Much of this stems from the country's considerable solar power potential, with the government estimating that Indonesia has the potential to install 3.3TW of solar capacity, based on the amount of sunlight the country receives.

What is Indonesia's Energy Policy?

The National Energy Policy aims to achieve self-sufficiency and storage of energy in Indonesia. Developed by the National Energy Commission, the Policy provides a method for energy management.

Will Indonesia develop new floating solar projects?

Earlier this year, Masdar and PLN NP announced plans to treble the capacity of the 145MW Cirata floating solar park, and with the government estimating that the floating solar sector alone has the potential for 28.4GW of capacity,

there is considerable interest in developing new floating solar projects in Indonesia.

Does Indonesia need an energy storage ecosystem?

IESR notes that Indonesia is still in the early stages of energy storage adoption and stresses the need for a comprehensive strategy to accelerate the development of an energy storage ecosystem.

### Indonesia s photovoltaic energy storage policy
