Installation of photovoltaic power station inverters

Overview

How do I install an inverter?

Install at an appropriate height for ease of viewing LED indicators and operating switches. The inverter(s) must be installed on a structure with a load-bearing capacity of >4 times the inverter weight. Install the inverter vertically or at a minimum back tilt of 10°. Forward installation or upside-down installation is prohibited.

How do I install a photovoltaic system?

Follow along with the essential steps of photovoltaic systems installation, from mounting solar modules and connecting to the grid, to commissioning and regular maintenance for optimal performance.

What is a PV inverter?

The inverter is a key component of the PV system and is usually installed near the main electrical panel. It must be easily accessible for maintenance and monitoring.

Can CSI solar inverter be installed under load?

CSI Solar Co., Ltd. DO NOT DISCONNECT UNDER LOAD! Do not install the inverter on structures constructed of flammable, thermolabile, or explosive materials. Ensure the inverter is out of children's reach. The ambient temperature should be between -30°C \sim 60°C. The humidity of the installation location should be below 100% without condensation.

How to install an inverter in a distributed power plant?

This mounting method is commonly used in ground-based distributed power plants. Usually, the inverter is mounted directly on the fixed support of the module or mounted on the column under the module by using a clamp. The inverter shall be installed in an area where there is sufficient space to ensure proper ventilation.

How do I connect multiple inverters to a PV system?

When there is only one inverter in the PV system, connect the additional grounding cable to a nearby grounding point. When there are multiple inverters in the PV system, connect grounding points of all inverters and the PV array frames to the equipotential cable (according to the onsite conditions) to implement an equipotential connection.
