Internal design of base station communication cabinet

Overview

What are the two communication systems we take as a baseline?

The two communications systems we take as a baseline are the telephone system and the Internet. The two networks share physical links, but could scarcely be more different. The telephone system operates on the basis of fixed path connections set up as part of call initiation. It provides two-way voice communication of high quality.

How does a base station work?

Each base station is designed to operate with a number of frequencies at the same time, with pairs of separated frequencies used for transmit and receive. Operation of the air interface involves close interaction between the mobile and the base station. The following items are functions impact the base station system structure.

What is the base station working group?

This document is a compilation of documents developed in the Base Station Working Group. It describes the structure of base station systems with a convergent top-down and bottom-up framework. The BSWG has now moved beyond detailed consideration of these specific contributions.

Why is a base station important?

In many cases the base station is most of the time only an intermediate component between the network and the handheld. However, in certain cases the downloading operation itself may have an influence on the way the base station has to work and so the base station is an important actor.

What is the SDR Forum base station working group?

Within the SDR Forum Base Station Working Group, we are primarily interested in considering communications systems that have a wireless connection from a network to a person at a remote terminal. That individual

typically wants to talk from their personal device to another person, or wants to see information on a screen in their hand.

Why does the base station not appear in the MSC diagram?

The base station is completely passive and so it does not appear in the MSC diagram. Sum-up: The network first sends a download request to the SDR handheld that answers if it's ready or not.
