

### **SolarInvert Energy Solutions**

# Inventory of photovoltaic inverter industry chain

#### **Overview**

What is the global solar PV inverter market like in 2023?

Global solar PV inverter\* shipments grew by 56% in 2023 to 536 GWac, with China accounting for half of all shipments as the country's solar demand doubled in 2023, according to the latest analysis by Wood Mackenzie. The top 10 PV inverter vendors, led by Chinese giants Huawei and Sungrow, controlled 81% of the global market.

Who owns the global PV inverter market?

The top 10 PV inverter vendors, led by Chinese giants Huawei and Sungrow, controlled 81% of the global market. Huawei and Sungrow alone captured over 50% of the global share, thanks largely to their popular utility-scale inverters, reports the market analyst.

Who makes solar inverters?

The US market was led by Sungrow and Power Electronics, while Europe was led by shipments from Huawei, Sungrow and SMA. \*A solar inverter is an electrical converter which changes the direct current (DC) electricity captured by solar panels, into alternating current (AC) that can be fed into the grid.

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity – ten times more than Europe – and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

Does solar PV supply chain need a diversified supply chain?

Source: International Energy Agency, Special Report on Solar PV Global Supply Chains (July 2022). From an energy security perspective, it is important that

the productions of silicon, silver, aluminum, and copper are geographically diversified. Otherwise, it would make the supply chain of crystalline silicon solar PV systems vulnerable.

What will the solar PV industry look like in the 2030s?

In the 2030s, improvements in solar PV recycling and the widespread adoption of new technologies like perovskite cells, which development is led by China (glass substrate) and Japan (film substrate), will provide new opportunities to further diversify the global solar PV supply chain.
