**Inverter has sufficient power**

## Overview

How to choose a power inverter?

Power inverter output power must be greater than the power of home appliances or electrical devices, especially for the appliances with high starting power, such as refrigerators, air conditioner, etc. When choosing a power inverter, a large margin should be left to avoid the burning of inverter.  
3.

How much power does an inverter use?

Average power would usually be much less than typical or surge and is not usually a factor in choosing an inverter. If you run a pump for 20 minutes and a small TV for 20 minutes during a one hour period, the average might be only 300 watts, even though the pump requires 2000. Average power is only useful in estimating battery capacity needed.

What is a power inverter?

Power inverter that converts DC power to AC power provides a great convenience people's lives, especially in home appliances, such as air conditioner, refrigerator, TV, VCR, etc. In order to optimize the use of the inverters in these home appliances, people should pay much attention to proper operation of power inverters.

How many Watts should an inverter run?

If you expect to run a certain watt of load, it is a good practice to multiply this by 1.2 or 1.25, which not only will work as a buffer in case there is any underestimation, but this will also be a more proper and efficient use of inverters as they are often running most efficiently at about 70 to 80% load.

Do AC appliances need a 120 volt inverter?

Our batteries come in different voltages (12,24, & 48v) But AC appliances required 120 volts (because our grid power comes in 120 volts). So an inverter

will convert the lower voltage of the battery into 120 volts in order to run AC appliances.

What should the DC input voltage of a power inverter be?

The DC input voltage of the inverter should be the same as the battery voltage. Every inverter has a value that can be connected to the DC voltage, such as 12 Volts and 24 Volts. The battery voltage should be the same as the DC input voltage of the power inverter. 2.
