# Investment estimation of peak load storage projects

#### **Overview**

What is energy storage analysis?

This analysis identifies optimal storage technologies, quantifies costs, and develops strategies to maximize value from energy storage investments. Energy demand and generation profiles, including peak and off-peak periods.

How do I develop a valuation tool for energy storage?

Provide technical parameters and relevant data for three example use cases that could be used in a valuation tool. Identify a list of publicly available DOE tools that can provide energy storage valuation insights for ESS use case stakeholders. Provide information on the capabilities and different options in each modeling tool.

What is a good roadmap for energy storage deployment?

A roadmap for energy storage deployment with timelines and cost estimates. Technologies with low lifecycle costs and high round-trip efficiency are ideal candidates for implementation. Positive ROI and reasonable payback periods indicate financial feasibility.

Can long-duration energy storage improve grid security?

Long-duration energy storage (10–100 hours duration) can potentially complement the reduction of fossil-fuel baseload generation that otherwise would risk grid security when a large portion of grid power comes from variable renewable sources. Current energy storage methods based on pumped storage hydropower or batteries have many limitations.

Can particle-based energy storage provide grid-scale energy storage capacity?

Thermal energy storage (TES) has unique advantages in scale and siting flexibility to provide grid-scale storage capacity. A particle-based TES system has promising cost and performance for the future growing energy storage needs.

What is long-duration energy storage (LDEs)?

Long-duration energy storage (LDES) with storage duration of 10–100 hours can potentially complement the reduction of fossil-fuel baseload generation and coordinate the electricity supply and demand that otherwise would risk grid security when a large portion of grid power comes from variable renewable sources.
